COMMUNITY-GOVERNED AI FAIRNESS

Libra

Standards set by the people AI actually serves

FOUNDER P0

APRIL 2026 · DEMO LIVE · SESSION PROPOSED

THE PROBLEM

When city AI starts deciding, *who sets the rules?*

District 3 is considering a resident session around Emily, an AI voice agent used in city call workflows. If Emily routes residents differently, mishears Black Detroit speech, or works better for some people than others, fairness should not be left to vendor defaults.

Most cities still lack a way to turn resident input into a standard the city can verify, publish, and use in procurement review.

THE SOLUTION

One session. *One public standard.*

Libra turns a resident session into a technical fairness standard with a signed receipt, public registry record, vendor evidence check, and contract appendix for procurement drafting and review.

Demo/sample Emily artifacts exist now. A real District 3 Emily standard begins only after the live resident session.

DISTRICT 3 EMILY PILOT · SESSION PROPOSED

Pilot Framework

SESSION	90-minute facilitated session
SUBJECT	Emily AI voice agent
PARTICIPANTS	10–15 District 3 residents
CONVENED BY	Office of CM Benson
LIVE TODAY	Demo workflow + signed proof
AFTER SESSION	Resident-set Emily standard
PUBLIC RECORD	Registry entry + receipt
VENDOR CHECK	Evidence checked to standard
PROCUREMENT	Appendix PDF for drafting/review
TIMELINE	60 days from go-ahead

WHAT WE'RE ASKING

01 A letter of support from the council office for the pilot

02 Help identifying 10–15 District 3 residents to participate

03 A room — the session is 90 minutes

NO CITY FUNDS REQUIRED FOR THE PILOT

WHAT DISTRICT 3 GETS

- → A community-defined Emily fairness standard after the live session
- → A signed receipt with public verification
- → A public registry record tied to the standard
- → Vendor evidence checks against that standard
- → A contract appendix for procurement drafting and review

THE BIGGER PICTURE

Libra is demonstrable end to end in sample mode today. District 3 would turn that demo path into a real civic standard Detroit can reuse when future city AI systems need community-defined fairness.

In plain terms: residents set the standard, the city can publish it, and vendors can be asked to show evidence against it.
